

Air Conditioner Soundproofing

AC too noisy...does it meet the legal limits?

Non obtrusive noise reduction of the unit, using quality high performance Australian made soundproofing materials.

Decidamp - dampens sheet metal and removes the energy; the vibration and resonating are then diminished.

Apply on any panels externally / internally and fences.

1300 x 1000 x 1.3mm foil faced self-adhesive sheet, cut with knife.

Sorberdamp - vibration dampening of sheet metal, noise reduction and absorption.

Apply internally on access panels or where there is adequate space and where air flow will not be affected.

1300 x 1000 x 25mm AGC faced self-adhesive sheet, cut with a knife

Silencer acoustic shroud – fan noise is lowered at the source by the design and 32mm Sorberbarrier acoustic liner. Air flow is now only sideways and still maintained.

400H x 460W top plus length and width of the unit. Comes as 3 panel galvanized sheet flat pack with brackets for mounting on top of the unit using some of the existing screws.

Sorberbarrier - on the fence or structure to reduce and absorb noise. The floating barrier reduces the lower frequencies.

Apply directly onto any flat surface.

2200 x 1300 x 32mm AGC faced self-adhesive, cut with a knife.
