

Reduce Air Conditioner Fan Noise

The fan noise is isolated at the source by the design and the 32mm Sorberbarrier liner. The enclosure is made to size and sits on top of the unit so it is non obtrusive and simply fastened into place with screws.

Noise levels are considerably reduced by the Sorberbarrier liner and acoustic data is readily available.

The air flow is now only sideways and the unit's performance and warranty should not be affected. However, it is recommended to check with the manufacturer any minimum distance required.
