

Acoustic Walls & Barriers – The sound alternative to traditional walls.

Pre-engineered to 12m, Flexshield's SonicWall provides privacy...plus unheard-of noise reduction.

High block walls and tilt panel systems are great for privacy and security, however if you need the added advantage of real noise reduction, SonicWall is the cost-effective alternative.

As well as shielding your property from busy roads and noisy neighbours, these composite acoustic panels help limit your own noise exposure for ultimate operational efficiency.

NATA-tested and certified to AS 1191-2002, SonicWall is the perfect solution.

It is available in single or double wall configurations to suit your noise requirements and different post heights for varying wind regions.

It provides a smooth, stylish fibre cement finish – on both sides – that can be further enhanced by applying anti-graffiti coatings for added protection.

Acoustic Wall Barrier to power station

Effortless installation

Installing SonicWall couldn't be faster or easier thanks to its unique, boltless Centalok™ system.

There's no need for cranes or anything else that might disrupt the site – you simply concrete the footings and structural steel posts in one day and fit the smart, modular panels the next.

This ease and speed of assembly is a real bonus for busy commercial and industrial operations.

Benefits

- Excellent sound reduction properties
- Smooth, crack-free finish for the lifetime of the wall
- Fast, boltless install (no cranes or rigging)
- Identical on BOTH sides
- Fully customisable

A host of applications

- Commercial
- Heavy duty industrial
- Mining
- Roads
- Railways
- Infrastructure
- And more

“ More than happy!

Thanks for all your help with our noise issues!!

Flexshield’s service was outstanding from start to finish and we are more than happy.

The noise barrier supplied works better than expected and the installation was quick, smooth and problem-free. We will be using Flexshield again in the future if the need arises.

Thanks Guys, great job!

*Liam Reed

“ The noise reduction is incredible!

Very happy with the acoustic walls around the PowerStation.

I can’t believe how fast it went in and the noise reduction is incredible!

Look forward to working with you on more projects.
