

Masonry Common Wall Soundproofing

Want to reduce the neighbour's noise through masonry common walls? Vibration dampening system that absorbs and reduces noise.

Sound Deadener mat. 500 x 300 x 2mm self-adhesive mats that de-couples the system to reduce the airborne and structural vibration and therefor noise transmission through the wall.

Wavebar Barrier (MLV) 2 layers of 4kg flexible noise barrier to provide superior acoustic reduction across all frequencies. Average Rw 31noise transmission loss.

13mm Fyrechek plasterboard which is 10kg /m2 density and fire rated for common walls.

Installation - remove all wall trims and frame with the **Sound Deadener** mats Then vertical mats at 600mm centres.

Attach **MLV** vertically and fasten across the top every 300mm

Attach **Plasterboard** vertically and fasten to the wall through both materials.

Total system width 19mm so minimal loss of space.

Do it once, do it right.
